- Digitalised Occurrence records and Incident reports, no more struggling in report validation!

- Audit log ready in one click, easy to retrieve records with search on time, keywords, etc.

- Customisable designs to best fit into your Standard Operating Procedure.

Integrated Visitor Management System(IVMS) offers a simple and direct solution for visitor registration.

Visitor that walks into the premise will proceed to the guard post for registration by scanning their authorised photo identity. While doing so, the security officer will record visitor's contact number and destination that he wishes to proceed.

Once the process is done, our system will generate a sticker with visitors' details. It will be a form of temporary pass, or the management may opt for SMS function which customisation and cellular service are required. Upon check out, visitor will only require to scan the QR code printed on the temporary pass, system will automatically check out for him/ her. Process completed.

Incident Reprots, one of the function that comes with IVMS, a standalone page dedicated for the report itself. Security officers will only select the most relevant description according to the incident from the dropdown list. Of course, additional details can be added by typing. It will also indicate if police has been notified on the incident with poice ID required or if the incident has been closed.

E Occurrence Book offers on a standalone page for security officers to record the daily occurrence throughout his/ her tour of duty. Simple drag and drop function to select the occurrence.

We believed saving time for our security officers with technology, they are able to be focus on more security related duties.
